

LOWER YOUR ENERGY BILL

Top 10 Low Cost Steps You Can Do This Summer

1. Caulk and weatherstrip around windows and doors to stop air leaks. Seal any gaps in floors and walls around pipes and electrical wiring.
2. Change filters monthly — dirty filters make your air conditioning unit work harder.
3. Replace incandescent bulbs with compact fluorescents; they use 75% less energy and last 10 times longer.
4. Install aerating, low-flow faucets and showerheads & repair leaky faucets.
5. Tune up your heating and cooling system. Seasonal tune-ups will keep your system running as efficiently as possible. Have your ducts inspected. Repair air leaks and seal and insulate cooling system ductwork.
6. Insulate! Add insulation to your attic, crawl space and any accessible exterior walls. Add pipe insulation to first 5 feet of water pipe coming from your water heater. Install light switch and electrical outlet seals on exterior walls. Wrap your water heater with insulation or install an insulating blanket.
7. Look for the ENERGY STAR® label when replacing large or small appliances.
8. Use power strips for home electronics, and turn off power strips when equipment is not in use. TVs and DVD players, etc. still use power when the switch is off.
9. Replace worn-out seals on your refrigerator and freezer.
10. Plant a tree! Shade trees placed on the south or southwest side of your home will keep it cooler.
